Appendix B

Emissions Inventories

(This page left blank for printing purposes)

Summary of Emissions Inventories

This appendix contains the attainment, interim, and maintenance year SO₂ emissions inventories for the Allegheny, PA NAA, along with assumptions used for the inventories. Detailed listings of the emission inventories by facility/process (for point sources) and by source sector/description (for area and mobile sources) are given in Appendices B.1 (attainment year 2017), B.2 (interim year 2026), and B.3 (maintenance year 2035).

Documentation on the projection methodologies is given in Appendices C and D. Electronic versions of all files used for the attainment and projected inventories are available upon request.

Allegheny, PA Population Percentages

The Allegheny, PA SO₂ NAA represented roughly 10% of the total county population from 2010 through 2020, based on official decennial U.S. Census Bureau counts. Population percentage was used to apportion the area and mobile source emissions to the Allegheny, PA area from the Allegheny County totals.

The base year 2011 SIP inventory and the 2017 attainment year inventory were assigned the percentages closest to the time of the inventory (2010 and 2020, respectively). Population projections (SPC, 2019) show that the area is expected to remain at about 9.7% to 9.9% population percentage through the maintenance year 2035. For consistency, the interim and maintenance year inventories were scaled from based on a constant percentage of 9.8%.

The following population percentages were used for each inventory, from base year 2011 through maintenance year 2035:

- 2011 base year SIP inventory: 10.4%
- 2017 attainment year inventory: 9.8%
- 2026 interim year inventory: 9.8%
- 2035 maintenance year inventory: 9.8%

Attainment Year (2017) Emissions Inventory

Point and area source data for the attainment year 2017 inventory have been taken directly from the 2017 NEI, and nonroad and onroad mobile source emissions have been taken from MOVES3 output. Corrections made to the 2017 point and area inventories are described below.

Corrections to the 2017 Emissions Inventory

The following corrections to the 2017 NEI point and area source emissions have been made to the Allegheny, PA NAA attainment inventory. These corrections were made for better accuracy in the 2017 attainment inventory, as well as for consistency with the 2011 base year inventory for the Allegheny, PA SO₂ NAA and with PM_{2.5} inventories for the 2012 NAAQS.

- Open burning emissions from the waste disposal sector have been excluded from the area source data category since these activities are prohibited in Allegheny County. The total reported emissions of SO₂ for these area sources represented about 4.3 tons/year for the Allegheny, PA

NAA in 2017, based on the population percentage given above. These emissions correspond with the following Source Classification Code (SCC) codes:

- 2610000100 (Yard Waste - Leaf Species Unspecified)
- 2610000400 (Yard Waste - Brush Species Unspecified)
- 2610000500 (Land Clearing Debris - All Categories)
- 2610030000 (Residential Household Waste)
- For consistency with PM_{2.5} inventories, the construction dust SCC code 2311020000 (SIC 15-17: Industrial, Commercial, Institutional Total) has also been excluded from the area source data category. There were no reported emissions of SO₂ for these area sources for Allegheny County in 2017.

2017 Attainment Inventory, Summary

Table B-1 shows the 2017 attainment year inventory by data category for the Allegheny, PA NAA, repeated from Section 6.1 of the main document.

Appendix B.1 provides a detailed listing of the attainment inventory.

As discussed in Section 6.1.1 of the main document, Table B-2 shows a listing of the USS Mon Valley Works actual point source inventories by plant for 2018-2021. These emissions can be compared to the 2017 attainment inventory and to the 2018 projected SIP inventory (ACHD, 2017).

Projected Year (2026, 2035) Emissions Inventories

The projected inventories used the 2017 attainment inventory as a starting point for the maintenance timeframe for the area. For consistency with the 2017 attainment inventories, the corrections to 2017 NEI described above have been carried over into the projected inventories. Additionally, the same methodology of population percentage was used to scale the Allegheny County area and mobile source emissions to the Allegheny, PA NAA.

Assumptions for the Projected Point Sources

The attainment year point source emissions (2017) were projected to the future case years (2026 and 2035) according to the methodologies described in the main document and in Appendix C.

All processes for the Koppers-Clairton facility were removed from the point source projections.

The USS Clairton Coke Batteries 1-3 and associated processes were removed from the point source projections. The processes for the Coke Batteries 1-3 include the following:

- Battery Underfiring (Stacks 1-3)
- Battery Fugitives (Batteries 1-3)
- Quench Tower 1
- Pushing Emission Control (PEC) system 1-3
- Screening Station (1-3)

Reductions for general processes at the USS Clairton Plant (boilers, by-products, material handling, flaring, etc.) or at other USS Mon Valley Works plants (Edgar Thomson and Irvin) may also occur because of the shutdown of Coke Batteries 1-3. However, possible reductions for the general processes have not been quantified for this maintenance plan, and these general processes were projected from the levels in the 2017 attainment inventory.

One new major source facility (Invenergy Allegheny Energy Center, or AEC) has been proposed within the Allegheny, PA NAA in Elizabeth Township. Invenergy has gone through the nonattainment new source review process for this proposed plant, and ACHD issued an installation permit for the plant on October 5, 2021. Groundbreaking has yet to occur, so there are no actual emissions inventoried to date. As a high-end estimate, emissions (plantwide) equal to the permitted limit of 23.89 tons/year for SO₂ have been added to the projections for 2026 and 2035.

2026 and 2035 Projected Inventories, Summaries

Tables B-3 and B-4 show the 2026 interim and 2035 maintenance year inventories by data category for the Allegheny, PA NAA, repeated from Section 6.2 of the main document.

Detailed Inventories

Appendix B.1 shows the detailed emissions for 2017 attainment inventory, with point sources given by facility/process and area and mobile sources given by source sector totals. The tables are given by data category in the following order:

- 2017 Allegheny, PA point sources
- 2017 Allegheny, PA area sources
- 2017 Allegheny, PA nonroad mobile sources
- 2017 Allegheny, PA onroad mobile sources

Appendix B.2 shows the detailed emissions for the 2026 interim year inventory, in the following order:

- 2026 Allegheny, PA point sources
- 2026 Allegheny, PA area sources
- 2026 Allegheny, PA nonroad mobile sources
- 2026 Allegheny, PA onroad mobile sources

Appendix B.3 shows the detailed emissions for the 2035 maintenance year inventory, in the following order:

- 2035 Allegheny, PA point sources

- 2035 Allegheny, PA area sources
- 2035 Allegheny, PA nonroad mobile sources
- 2035 Allegheny, PA onroad mobile sources

The year and data category is given in the header of each table. Page numbering is shown in the footer of each table and is restarted for each new table by data category. Point sources are shown sorted by facility name, then by unit ID, then by process ID. Area and mobile sources are shown sorted by SCC code. Growth codes, growth factors, and/or models have been added to the tables for the projected inventories.

Emissions have been given in the detailed inventories in tons/year formatted to four decimal places. In Tables B-1 through B-5 above, as well as the tables in the main document, emissions have been rounded to whole tons/year. Note that fire and biogenic sources have been lumped with area sources for the detailed tables.

Table B-6 provides of a key of the parameters shown in the detailed inventories.

Table B-6. Key of Parameters for the Detailed Inventories

Parameter	Description
Point Source Facility	Point source facility name/location
Unit/Process Description	Description of the facility emissions unit/process
EIS Fac ID	Facility ID (NEI)
EIS Unit ID	Emissions unit ID (NEI)
EIS Proc ID	Emissions process ID (NEI)
NAICS	North American Industry Classification System code
SCC	Source Classification Code
Growth Code	MARAMA growth code (point or area source)
Growth Factor	Growth/control factor (point or area source)
SO ₂	Sulfur dioxide emissions (tons/year)
Source Sector	Area or mobile source sector
SCC Level Description	Area or mobile source SCC level description
Model	Model used for emissions data (mobile sources)
Vehicle Type	Mobile source vehicle type (car, truck, bus, etc.)
Type ID	MOVES mobile source vehicle type ID
