<b>Parallel Test Report</b>	1
<b>Reconciliation of Vote Totals in Script to Final Results Tape, Flash Cards and Master PEB</b>	2
<b>Exhibit A</b> - Parallel Testing Work Performed	
<b>Exhibit B</b> - Zero Tape	
<b>Exhibit C</b> - Scripts	
<b>Exhibit D</b> - Final Results Tape	
<b>Exhibit E</b> - Flash Cards and Personalized Ballot Printouts	
<b>Exhibit F</b> - Precinct Listing	
<b>Exhibit G</b> - Random Sample Selection	
Attachment - 9 Video Tapes	

Mr. William McKain, County Manager  
County of Allegheny, Commonwealth of Pennsylvania  
Office of the County Manager  
436 Grant Street  
Room 119 Courthouse  
Pittsburgh, PA 15219

To assist with your evaluation of County of Allegheny's electronic voting machines, we randomly selected an election day polling location, scripted votes for parallel testing, and tested the functionality of the Direct Recording Electronic equipment, ES&S iVotronic voting machines. The test was performed on November 3, 2015, the date of the general election. The scripting component included creating hypothetical ballots for parallel testing by mimicking voter behavior and voting patterns from data and statistics provided by County of Allegheny, Department of Elections, for Precinct 267, Harrison, Ward 4, District 2. Our engagement was performed in accordance with the consulting standards prescribed by the American Institute of Certified Public Accountants.

The results of the work performed indicate that the three voting machines tested, accurately recorded and counted the results of 154 ballots cast for the selected polling location. Our results are supported by visual evidence that the electronic voting machine recorded and maintained the vote counts properly. At the beginning of the process, we verified that the zero tape did in fact contain zero vote counts for each candidate in each race. Testing was done under video surveillance, capturing votes as they were entered into each voting machine from the scripted ballots. At the end of the election process, we compared the vote totals in the script, the Master Personalized Electronic Ballot (PEB), the Final Results Tape, and Flash Cards from the machines tested and found them to be in agreement. There were no discrepancies between the number of ballots cast, ballots cast for a particular party, votes for a particular candidate, the number of under-votes, the number of canceled votes, and the audio ballot cast for the visually impaired.

Because of its special purpose, this report is not suited for any purpose other than to assist you in your evaluation and, as such, is intended only for your internal use.

## **Exhibit A**

The parallel testing work performed was as follows:

### **Control and Security Procedures**

1. We randomly selected a precinct.
2. We selected three ES&S iVotronic voting machines with "tamper-evident" seals from the County of Allegheny warehouse. We test-voted on each of the ES&S iVotronic voting machines.
3. We created a script for parallel testing to mimic voter behavior and voting patterns for the polling location randomly selected.
4. We obtained and secured the Master Personalized Electronic Ballot (PEB) and two Supervisor PEBs. The Master PEB is used to open voting machines and to print the zero tape (a "zero-vote" count tape from the iVotronic voting machines) before electronic balloting starts, and the Supervisor PEB is used to activate an iVotronic voting machine for each voter. Each PEB was secured in a locked file in our office prior to election day to prevent access and tampering.
5. We set up parallel test equipment where all actions could be visibly recorded by video surveillance. One video camera was set up to document the votes cast on each of the ES&S iVotronic voting machines selected.
6. We conducted the parallel test in a low traffic area to avoid interruptions.

### **Casting Votes**

1. Ballots were scripted to ensure that "voter turnout" in the mock election closely approximated the projected voter turnout for the randomly selected polling location.
2. The video camera was focused on the ES&S iVotronic voting machine screen in a manner that votes could be seen as they were entered.
3. Actual voting was conducted as follows:
  - First team member: Called out each vote as marked on the ballot script.
  - Second team member: As each vote was called, entered the vote in the ES&S iVotronic voting machine.
  - Second team member: Called back the votes cast as they appeared on the summary screen(s) on the ES&S iVotronic voting machine.
  - First team member: As the second team member called back the votes, verified that the vote was cast as it was read, and made a notation on the script.

The terminals closed at 8:00 PM. The final results tape was printed and the flash card from each voting machine was removed. Video camera tapes were marked according to the applicable voting machine and the time votes were entered into the voting machine selected for testing.
